Subject: RE: Stakeholder Feedback - Market Flexibility Webinar

- Will the IESO's potential RFP consider and include consideration for other market or combined system benefits that may be available from a proposal, such as:
 - Combined capacity outputs, output flexibility and generation timeframes to maximize value
 - Improved restoration or restoration timeframes or black-start capability
 - Leveraging low utilized existing contracted assets to enable a lower overall cost of service / increased value to IESO / Ontario

- Should an RFP occur, how would we (or any other participant) know whether our location is constrained and capable of adding additional flexibility?
 - o Is there a contact in the IESO that could indicate generation constraints within specific locations?

Please let me know if anything is not clear.
Thanks for the reply.

Regards,

Steve Fitzgerald
