**Subject:** IESO Market Renewal Stakeholder Engagement (MRSE)

Sent on behalf of John Maher:

Re: Market Renewal Initiative (MRI)

Thank you for the opportunity to participate in the IESO's Market Renewal Stakeholder Engagement Process.

Suncor has the following comments;

- 1) It is apparent that the Cap and Trade initiative will have significant impact on the power market, particular by virtue of the changes and allocations associated with natural gas and gas-fired generation. The IESO has made no reference to Cap and Trade within the Market Renewal Initiative(MRI) . Suncor believes this is a major oversight and that the MRI must encompass changes associated with Cap and Trade.
- 2) The IESO proposes to create a Day Ahead Market which creates the possibility that industrial load may have to schedule load. This would involve significant incremental resources without commensurate benefit for most industrial customers. Suncor recommends that a clear alternative be developed to load scheduling within the MRI.
- 3) The MRI may result in changes to existing electricity contracts. Suncor is concerned that these changes do not result in any loss of value or change in the fundamental rights of existing contract-holders and that the process allow sufficient time for participants to evaluate and respond to any changes of an administrative nature.
