**Subject:** Market renewal and non-emitting resources

As you may know, non-emitting resources sector representatives identified a need for additional input on their role in the new wholesale electricity marketplace. In response to this feedback, the IESO and the Market Renewal Working Group created a subcommittee to help inform how non-emitting resources will participate in our future market design and explore how non-emitting resources might impact market outcomes, in light of Ontario's clean energy supply mix.

In recent weeks, it has become apparent that the IESO as well as the Non-emitting Resources Subcommittee requires more information from the sector so, in February, the IESO will be issuing a Request for Information (RFI). The RFI will be issued in two phases with the first focussing on the technical and operational characteristics of non-emitting resources. The second phase will centre on commercial and regulatory considerations and will be released toward the end of the summer of 2018.

There will be a webinar on **December 21, 1:30 pm – 3 pm**, that will provide more information about the objectives and timelines for the RFI. To participate, please register at: <http://www.meetview.com/ieso20171221/>.

In the meantime, your feedback on this initiative – or any other market renewal project – is most welcome and encouraged. Please contact the market renewal team at [engagement@ieso.ca](mailto:engagement@ieso.ca) to share your thoughts and ideas.
