Subject: NER - Draft Phase 1 RFI Feedback

Hello,

After review of the Draft RFI we have the following comments:

- There is no explicit opportunity to provide a description of the Non-Emitting Resource that will be discussed.
 - Question 1 of Appendix B does ask for supplemental information but it is focused on the products/services to be provided and not the technology that will provide those products/services.
 - For new technologies, like the one being developed by Kelvin Thermal Energy, it would be helpful if we could introduce the technology prior to getting into providing information for the specific questions.

Thanks for this opportunity to provide feedback. We look forward to completing this process.

Joe Slater
Director, Commercial Projects
