**Subject:** Weather data for Energy Performance Program

Tom and Evelyn,

Thanks so much for the webinar. Sorry my last question came in 2 chunks. It sounded like you were going to wrap up, so I just hit enter to get at least part of the question in and have the question register before the session was closed.

While I'm sure we'll have more feedback on the program, I wanted to make sure I officially raised the point about weather data asap. Environment Canada data won't be as easy to use in RETScreen Expert, whereas the NASA data and data from local met stations that RETScreen downloads at the click of a button will be really easy to use. Maybe some of the met stations are Environment Canada stations, but I'm sure some of them are not, and the NASA data is the most convenient to use in many cases. It would be great to not be limited to the Environment Canada data.
