**Subject:** Seeking Feedback on the Provincial Energy Manager Program

After my initial review of the Draft Document, I needed to talk with someone from the IESO to gain a better understanding of what was being asked.

The phone call did assist me in understanding the proposal better; however, as a stand-alone document, I would suggest its introduction be written in a more simple, clear fashion outlining what exactly are the benefits to the winning proposals.

Also, the role of the 250 million kWh (per annum?) lower limit for consideration combined with multi-LDC impacts should be clarified. Is it a) a “must have” requirement?, b) a factor among others with some scoring?, c) neither a or b – and so should be dropped from the document.
