Subject: IESO to Launch New Revenue Metering Data Distribution Solution

The IESO is launching a new metering data distribution (MDD) solution which will replace the MV Web application currently used to view, request and download revenue metering data.

The launch date for MDD is targeted to be August 29, 2015. The IESO will confirm this date by July 31.

The MDD solution will now have participants download meter information through the IESO reports site. In addition to standard reports that will be delivered daily and monthly, participants can also create adhoc reports through [Online IESO](#).

The IESO held market trials of the new solution with participants and published a [Response to Participant Feedback](#) which contains a summary of some of the changes participants can expect with the new solution. In addition, draft versions of the [Revenue Metering Reports Implementation Guide for EDI-867 Meter Data](#) and the [Revenue Metering Reports Importing and Reading the IESO EDI-867 Meter Data File](#) are also posted for your information and to help you navigate the new file formats.

All information about the new MDD solution can be found at: [IESO Settlement Meter Data Applications Working Group \(SE-113\)](#).
