Subject: Update - Meter Data Distribution Market Trials

The Meter Data Distribution (MMD) market trials testing period was initially scheduled over a period of four weeks ending May 8, 2015.

Based on the feedback from various market trials participants we have decided to extend the duration of the market trials testing by one week.

However, to facilitate system maintenance and release of new software updates, we will take an outage of the Sandbox Meter Data Management (MDM) system starting Friday May 8, 2015. We expect to have the Sandbox MDM system made available for market trials testing early next week. We will issue another communication to inform when you can resume testing.

During the MDM outage:

- The Online IESO Sandbox will still be available for market trials participants to create or edit meter data report profiles. The meter data report profiles will be saved into the system and will take effect after the MDM outage is completed. The submission of ad-hoc meter data requests will not be available during the MDM outage (i.e., ad-hoc requests will not be saved into the system).
- The IESO Reports Site Sandbox will be available for market trials participants to view and download meter data reports that were published during the four weeks of market trials from April 13 to May 8, 2015.
- Meter data reports (i.e., key dates and ad-hoc reports) will not be published during the MDM outage timeframe.

Thank you – Cynthia Harrison
