

IESO TIM and CML Update

Jeffrey Huang, Technical Analyst
Revenue Metering and Meter Data Management

June 12, 2018

TIM Update

- IESO received the latest Translation Interface Module (TIM) used in MV-90 for ION meters.
- New TIM will enhance event logging and status reporting.
- New TIM is currently under IESO testing and we expect to implement the new TIM in the near future.
- There should be no changes in terms of meter configuration for MSPs.

Conforming Meter List Update

- IESO tested and approved two new versions of Schneider ION meters: ION 8650-V421 and ION 7650-V400.
- ION 8650-V421 is a socket meter similar to all previous IESO approved ION meters.
- ION 7650-V400 is a panel meter that needs to be re-wired every time the meter is changed.

Conforming Meter List Update

- The Conforming Meter List (CML) will be updated to include the two new models.
- Existing ION Meter Framework will be updated to include the new models.
- There is no change as to meter configuration compare to other ION models approved by IESO.
- There is no change to commissioning requirement for meter replacements.
