

Stakeholder Feedback and IESO Response

DRWG Meeting 5 – November 22, 2016

| Topic | Participant | Summarized Comment | IESO Response |
|---|-------------|---|--|
| Residential Demand Response – Control Group Communication Protocols | OhmConnect | Does the IESO intend to propose communication protocols between the DR aggregator and contributors in the control group? OhmConnect sends frequent communications to its user base and believes control group contributors should not be treated any differently by the aggregator, except that they will not be “activated” during a DR event. | The IESO does not propose any communication protocols; the aggregator may communicate as required with contributors, whether they are in the control group or in the treatment group in a given month. |
