Subject: NERSC Scenarios

Hi Judy – sorry I missed the last NERSC meeting but have just reviewed the materials on the webinar – I'm interested as to why in your slide 7 there are no alternatives provided with respect to cost reductions for waterpower relative to current costs – a significant increase in input costs in Ontario in the last decade is attributable to regulatory burden – we have a new government committed to reducing red tape and an “open for business” mantra – and we'll certainly be pursuing this agenda – I'm also interested in how the modeling will compare 100 year lifespan assets such as waterpower relative to other shorter lived technologies.

Thanks

Paul Norris
