

John Sherin

A results focused leader in the energy sector with an extensive background in the utility/energy field and related technologies. Currently the Manager of Climate Change and Energy Conservation at the Region of York. In this role he works across twenty plus line of municipal services to drive energy conservation and sustainability projects. Previously John was the Director of the Conservation and Demand Management (CDM) Planning and Compliance at PowerStream Inc.

Throughout his career he has demonstrated leadership in the energy sector and has been recognized for my innovative contributions in the areas of energy efficiency, program design and overall leadership.

Currently, as Manager of Climate Change and Energy Conservation at York Region – John manages all aspects of corporate energy services, which includes strategic energy procurement, CDM studies and plan development, as well as developing and implementation of energy efficient standards for Regional buildings. John also has extensive knowledge and experience with the design of energy conservation and rate based programs in Ontario.

John has extensive formal and informal networks throughout the energy sector. For example, he has recently been appointed to the IESO Stakeholder Advisory Council representing Ontario Communities and has also been the Chair of the Provincial residential conservation working group, representing the utility sector, the group responsible for program design within the residential sector. In this role he was able to provide strategic leadership to influence and guide new residential program design/development.
