Subject: Wheel Through Curtailments as a Control Action

As stated in the Q&A, the IESO does not issue SSRs for transaction curtailments. However, in response to the comments received on the IMDC, the IESO will publish an SSR when we see a nuclear shutdown scheduled several hours out and determine that curtailing linked wheel-through transactions will prevent this shutdown. The SSR will state that transactions may be curtailed for reliability. Such curtailments will be implemented no later than the last run of pre-dispatch for the shut-down hour.

This timing of linked wheel curtailments was not covered in the Q&A document, but we have provided further clarity in the [IMDC](#) to address some stakeholder concerns with respect to transparency. While the IMDC has been issued today, the IESO will be responding to subsequent feedback received.

Regards,
IESO Engagement
