Subject: Market Information System Refresh Project Update

The following was communicated in the August 24 IESO Bulletin:

The IESO is refreshing the Market Information System (MIS), one of the key systems used to determine dispatch schedules. There will be no change in functionality, and the only impact to market participants will be a change to the Dispatch Advisory Report which is expected to increase the number of critical intervals displayed from five to up to eleven intervals.

The MIS refresh project began in 2015 and is on target with an in-service date expected in Q4 2017. A two-week trial period in the sandbox environment is expected to commence in November to allow testing the retrieval of the new Dispatch Advisory Reports. The start date of the trial, once confirmed, will be communicated to affected participants, and a sample schema will be posted on the Public Information Sessions [webpage](#).

If you would like to participate in the sandbox testing, please register via e-mail at engagement@ieso.ca

If you expect to participate in testing the retrieval of the new Dispatch Advisory Reports in November and have an existing Sandbox account with access to Operational Reports, please test your account to ensure you can access the Sandbox IESO Private Reports Site at <https://reports-sandbox.ieso.ca/private/>. If you require a password reset, please contact customer.relations@ieso.ca.

If you do not have an existing Sandbox account with access to Operational Reports, please have your Rights Administrator request this access for you in [Sandbox Online IESO](#).

Thank you – Karla
