

Memorandum

To: Technical Panel
From: Josh Duru
Date: January 16, 2018
Re: MR-00435: Station Service Obligations

Attached for Technical Panel review and consideration are the following documents:

- Presentation – Station Service Obligations;
- Market rule amendment proposal MR-00435-R00.

The IESO proposes to remove the obligation for registered market participants to identify and provide station service estimates and place the obligation on the market participant responsible for registering the relevant facility, consistent with the intent of placing this obligation on the owner of a facility. This change will ensure that the market participant responsible for registering the relevant facility, which is the owner of a facility, is obligated to comply with the station service provisions in section 2.1A of Chapter 9.

At its meeting on November 22, 2017, the Technical Panel determined that the amendment submission MR-00435-Q00 warrants consideration and assigned a regular priority to the development of the amendment proposal.

The IESO presented the amendment submission to the [Revenue Metering Standing Committee](#) (RMSC) at its December 12, 2017 meeting. Feedback included general support from the RMSC on the direction of the amendment submission.

Panel Action and Next Steps

The IESO recommends that the Panel agree to post MR-00435-R00 for stakeholder comment for a period of two weeks, ending on February 8, 2018. The target for IESO Board consideration of the amendment is April 11, 2018.

Yours truly,

Josh Duru
