## **Comments on Stakeholder Plan**

I am pleased that the IESO is investigating how to enhance the value of the data set within Ontario's Meter Data Management and Repository (MDM/R). I fully agree that the MDM/R offers significant additional potential value for the design of conservation and demand response programs, system planning, policy development, academic research and to support innovation in Ontario.

However I am concerned that none of these functions are represented on the Foundations Working Group which will be limited to approximately 12-15 representatives with selection criteria that includes:

- Knowledge and experience of LDC advanced metering infrastructure (AMI) and customer information system (CIS).
- GIS and data mapping
- Information security and privacy
- Regulatory and legal issues related to data access and privacy

It is also not clear if this Working Group will be remunerated and what kind of support will be provided by organization.
