Subject: Reports Site Refresh Project Update

The first phase of this project is on target to be released in Sandbox on February 26. As mentioned in the last update, the existing programmatic interface will continue to work, and we encourage participants to test their scrapers prior to the release into Production which is scheduled for late March.

The second phase is also on target to be released in Sandbox late March and in Production in June. We will communicate once the dates have been established.

New URLs will be provided for Sandbox and Production for the new report site prior to their release in March and June, respectively. The current URLs to the existing report site will continue to operate in parallel during a specified transition period which is yet to be determined.

The new access methods for all reports are as follows:

- New web user interface for browser-based access
- Secure File Transfer Protocol (SFTP) for machine access
- RESTful API for machine access
 - Query available reports using a URL request
 - API returns output as XML or JSON
 - No dependency on UI – reliable and direct access to reports.

Supporting documentation will be available late March and posted on the SE-RSR page at <http://www.ieso.ca/Pages/Participate/Stakeholder-Engagement/Working-Groups/Reports-Site-Refresh.aspx>.

The current report formats, report versioning, and security will not change in any of the refresh phases.

Please submit any comments, questions, and sandbox testing feedback to stakeholder.engagement@ieso.ca.

Thanks - Karla
