Subject: Update on Reports Site Refresh Project and Renewal of Server CA Certificate

As previously communicated, Phase 1 of the Reports Site Refresh project was implemented in Production on May 13. Due to technical difficulties, we had to roll back later that evening. We are working to resolve the problems we encountered and are targeting May 25 as the new cutover date..

Important action required for API accounts:

The server CA certificate for private reports access will change when the report site certificate is renewed on May 25. You will need to update your scraper (CA certificate store) to include "thawte SSL CA - G2" to ensure your scrapers will continue to work starting on May 25.

Note for individual users:

The server CA certificate for private reports access will change when the report site certificate is renewed on May 25. You can choose to update your browser (CA certificate store) to include "thawte SSL CA - G2" for additional security.

If you have any questions or concerns, please contact customer.relations@ieso.ca

Thank you – Karla
