Subject: Outage Planning Guideline and Transmission Outage Report Schemas

As discussed at the May 2016 and July 2016 webinar for the Outage Management Process Redesign, several public and private reporting changes are required as a result of the outage management system replacement.

As such, new schemas and corresponding sample reports for the following private and public reports are now available on the IESO website at <http://www.ieso.ca/Pages/Participate/Change-Management/Report-Listing.aspx>:

Doc Id	Report Name	Report Type
OutagePlanningGuideline	Outage Planning Guideline Report	Private
TxOutagesTodayAll	All Transmission Outages Occurring Today	Public
TxOutages1to30DaysPlanned	Planned Transmission Outages Occurring Next 30 Days	Public
TxOutages31to90DaysPlanned	Planned Transmission Outages Occurring Next 2 to 3 Months	Public
TxOutages91to180DaysPlanned	Planned Transmission Outages Occurring Next 4 to 6 Months	Public
TxOutages181to730DaysPlanned	Planned Transmission Outages Occurring Next 7 to 24 Months	Public

These materials would be of interest to stakedholders that are either currently scraping information from the existing transmission outage reports or would like to begin scraping information from any of the reports listed above.

If you have any questions please contact customer.relations@ieso.ca.

Regards,
IESO Engagement
