Subject: Input on Draft Discussion Paper and Draft Stakeholder Engagement Plan for Outage Management Process Redesign Stakeholder Consultation (SE:109)

This e-mail is to provide Comments on the Draft Discussion Paper and Draft Stakeholder Engagement Plan for Outage Management Process Redesign (SE:109).

- As per the draft discussion paper some of the recommendations of the former Outage Planning Subcommittee were planned to be incorporated via software replacement. I understand that most these changes were never made as the software was never replaced. A concern is that the current consultation also involves software replacement. Is there a risk that changes developed in this consultation suffer a similar fate i.e. the business case for the software replacement is not approved and therefore any changes to the process are not implemented?
- The documentation and presentation for the April 17 meeting as well as the posting of information has been excellent.

Thanks
Amir Rouhi
