As far as the Discussion paper and the Stakeholder Engagement plan I am good with both of them however a couple of comments I would like to make is how aggressive the time lines are. The other comment is similar to the one made by the individual on the conference call around the IESO tool was valid. If you are unable to complete a tool change at the IESO what will the impact of this initiative be? I know you want to tie the two together and the initiative to provide a business case to get a tool enhancement/change but we should be looking at the process with our without your tool. I look forward to seeing this project through and working with all of the stakeholders.
