Hi Julia,

That's correct, as we didn't have any major issues with new plans for outage management, however after consulting with our fellow generators it makes sense to Brookfield Renewable to have a bit more time to roll out changes as we will need to adjust our internal outage reporting procedures as well as ensure field staff understand all the changes once implemented.

Thanks for responding,
Tracy

Hello Tracy: I am writing to clarify the intent of your below email. I noticed that it is addressed to a non-IESO employee, but IESO Stakeholder Relations was copied. Are the comments in the email intended as feedback into the SE 109 Outage Management Process Redesign engagement?

Thank you,
Julia

Subject: MR-00404-R00-Outage - SE-109

Hello Bill,

As discussed today Brookfield supports IESO proposed improvements to the Outage Management process as has been proposed. However since we will need to redesign some of our internal processes and train regional field staff to ensure our annual outage planning aligns with changes we would like the implementation of proposed changes delayed til at least Q2- 2014.

We feel the outage management change process rule changes are neutral in a overall cost benefit and therefore a delay of implementation date would only be helpful to allow all market participants time to implement the changes/training once approved.

Although we have followed the SE-109 proceedings and agree with intent to implement changes we do not feel a need to implement January 1, 2014, nor believe a delay would be detrimental to overall marketplace.

Thanks

Thanks

Tracy

Outage Management Process Redesign (SE-109)

The IESO is conducting a stakeholder engagement initiative to redesign its outage management process and tools. This redesign will focus on enhancements to outage related services to market participants as well as better align the IESO's process with its interconnected neighbours. The intent of the consultation is to ensure that those market participants who submit outage information to the IESO have an opportunity to provide feedback and input in the process redesign.

This redesign is in response to a preliminary review of outage processes along with discussions among stakeholders who identified objectives that will improve efficiencies in maintenance planning efforts, improve coordination among all customers and provide longer term certainty on outage requests.
