General Comments:

1. The presentation has the following wording:

The IESO will consider calculating and incorporating this reserve margin scenario into the 18 month outlook for the purposes of supporting the Quarterly AA process and provide feedback at a future meeting.

We support the calculation and inclusion of the above in the 18 Month Outlook.

2. The presentation has the following wording:

–The IESO proposes retaining historical outage requests in the new system for at least five years.

- However retention of historical outage request data from the existing solution to the new solution is subject to further IESO and stakeholder consultation (to be discussed at the next SE-109 meeting)

We support both the retention of historical outage requests for at least five years and the importing of historical outage request data from the existing solution to the new solution.

Comments on specific questions embedded in the e-mail in red.

Subject: Outage Management Redesign (SE-109): Next Meeting and Feedback Requested

Thank you for your participation in our Outage Management Process Redesign meeting on June 4. This stakeholder meeting presented the IESO's proposed software details for consideration and feedback. At this time, we ask that you review the presentation referenced at this meeting – the attached version updates tables on slides 20 to 23, as discussed in the meeting. This updated version will be posted on the SE-109 web page shortly.

Please submit your feedback by email to stakeholder.engagement@ieso.ca by next **Friday, June 13, 2014**. In order to help guide your feedback, we offer the following for consideration, however, please feel free to comment on any aspect.

1. Feedback on the proposed Equipment Model, specifically whether the equipment classes being proposed (slide 18) align with the equipment market participants typically report outages against.

Equipment classes align with equipment that outages are reported against.

2. Feedback on the proposed method for reporting outages to primary protections, breaker failure protections, automatic voltage regulators and power system stabilizers (slide 19). Participants are encouraged to provide suggestions for reporting on other auxiliary equipment in this manner.

This is a good change.

3. Feedback on the proposed constraint and purpose codes associated with the priority codes (i.e. forced, urgent, planned, opportunity and info) of the final process design (slides 20 – 24). Participants are encouraged to provide suggestions for additional constraint or purpose codes that would be meaningful to their outage reporting needs.
4. Feedback on the proposed mechanism for Auto Advance Approval (slide 25 - 32). Participants are encouraged to provide suggestions for additional constraint or purpose codes that would be meaningful for their outage reporting needs.

The proposal will require training so that market participants are able to determine whether a particular outage meets the Auto Advance Approval criteria.

5. Feedback on the proposed methodology for enabling the lead time (i.e. submission deadline) validation for the 3 Day and 1 Day Advance Approval processes within the vendor's existing software framework (slides 33 - 36).

Next Meeting – July 3 - Please note that the next meeting is scheduled for July 3 (9:00 – 11:00 am). Please contact stakeholder.engagement@ieso.ca to register to participate in person or via webex.

If you have any questions, please email stakeholder.engagement@ieso.ca

Thank you and regards,
Susan
