**Subject:** October 31, 2013 Settlement Meter Data Applications suggestion

Good Morning

I have a suggestion for IESO Data estimation and the way it is displayed in MVWEB. When I look at a Deliver Point to see if the IESO has done some editing and find the edit, it is time consuming to then find the meter that has that edit applied. Is there are way to Change the Font colour of the meter in question within the Delivery Point to show right away that this is the meter that has been edited? You can have the colour codes the same as what is current for the different types of edits.

Regards
