**Subject:** Residential DR

Good day.

I just wanted to comment on the 1 hour granularity presently in place for the residential meters. A number of LDC's are considering data analytics when it comes to the residential market. Even Whitby Hydro, we are working with the University of Ontario Institute of Technology on a data analytics project and granularity is an issue when identifying residential loads. I realize that Measurement Canada plays a role on this, but granularity is not only important to DR but other information based services that LDC's might be looking to implement. I would just like to group other services or products to DR that would benefit from a finer granularity.

Feel free to contact me if more information is required.
