**Subject:** Demand Response

I have a few questions regarding the DR3 procedure recently released by the IESO.

1. Is the IESO able to provide a quantity for each of the pseudo resources?
2. Do the quantities vary day to day?
3. Is the price trigger for all pseudo resources \$200?
4. Does the price trigger vary over time?
5. Please confirm that these resources are only bid into the energy market and not the operating reserve market.
6. The IESO has indicated that there will be additional reports in the future. Can you elaborate on the content of the reports and timing of their availability?
7. Some of the resources have a different availability window in the summer and winter periods. The paper indicates that the notification period expires with the HE7 predispatch. Is this the same for both winter and summer?

Regards
