Subject: SE-97 - Update and Placeholder for next meeting

To the members of the Market Information Focus Group:

Wanted to advise you of the next steps in the SE-97 Stakeholder Engagement. Please mark a placeholder for a conference call the afternoon of April 9th where the IESO will outline the progress so far in addressing the priorities for publishing information (specifically – addressing demand response transparency). Materials will be available in advance of the meeting – and will be sent directly to focus group members.

Also wanted to let you know that there will also be a change implemented tomorrow to the SSRs, announced through the bulletin this afternoon, to address one of the past MSP recommendations:

New Information Added to System Status Reports

The IESO will be publishing additional information for generator forced outages in the System Status Reports (SSR). Starting March 1, SSR's will indicate the fuel type for a generator loss over 250 MW. The fuel types reported in the SSRs will align with the fuel types in the Generator Output and Capability reports.

SSRs provide a forecast of future system conditions to aid market participants with their offer and bid submissions to meet system requirements. They are available at: www.ieso.ca/ssr

Thanks for your continued interest in this initiative.
