

List of market information enhancements for consideration and prioritizing:

#	Request	Requestor	Issue/Opportunity	Proposed Solution	Status
1	Presentation and availability of historical information	IESO	<p>IESO would like to develop an automated IT solution for publishing historical data on the website. This would involve standardizing the approach to publishing historical data.</p> <p>Most files containing historical data (market open to current) for downloading are currently posted on the Market Summary page. Other files can be provided on request.</p>	<p>Discontinue non-automated practice and move all download files of historical data to the IESO public reports site.</p> <p>Review existing set of historical download files available and focus on automating publication of data that is requested most frequently. The IESO will also stop publishing files that are not requested frequently.</p>	<p>For discussion:</p> <p>Published to the Reports Site? Annual folders? Historical to Market Opening?</p> <p>Decommissioned report data still available upon request.</p> <p>Further feedback required.</p>
2	Market Summaries	IESO	<p>IESO publishing daily, weekly and monthly Market Summaries but would like to review the format and usefulness of these reports to ensure they are providing value.</p>		<p>For discussion:</p> <p>Frequency of reporting? Published in other versions? File format?</p> <p>Further feedback required.</p>
3	Publish masked bid and offer data on a four month time lag	MSP	<p>MSP report MSP 2008/07/25, #3-2</p> <p>Also SAC request, but no time specified</p>		
4	Disclose fuel type of unit in the SSR when a >250MW unit is forced from service	MSP	MSP 2008/07/25, #3-4		
5	Provide monthly data of OPG regulated asset payments.	MSP	MSP 2008/01/15, #4-1(ii)		

#	Request	Requestor	Issue/Opportunity	Proposed Solution	Status
6	Monthly settlement summary	SAC	An aggregated total per month of all the charges on final settlement statements would be helpful for analysis. Include total market values of key settlement parameters such as AQEW, and each transmission charge determinant		
7	Demand Response	SAC	Forecasts and activation details		
8	Real-time grid congestion information	SAC	similar to NYISO, PJM, MISO and ISO-NE by reporting on a selection of 5-Minute Shadow Prices in real-time		
9	Shadow prices	SAC	as close to real time as MCP		
10	Generator capacity and output	SAC	Closer to real time (recognizing recent improvements)		
11	Planned and unplanned transmission outages	SAC	Include comprehensive list of transmission related penalties for limits		
12	Operating reserve schedules	SAC	Review the requirements or needs of the existing reports. IESO today publishes: RT Constrained OR in Market, RT Constrained Totals, RT Market OR in Market, RT Market Totals, RT OR in Market (C and U), RT Market Price Report.		
13	Generation forecasts	SAC, MSP	Forecast of all generation, self-scheduling, intermittent and embedded generation, wind, solar		
14	Greenhouse gas emission information	SAC	Including carbon credit monitoring and real time emissions profile		
15	Day ahead prices	SAC	To assist with DR and load shifting strategies		
16	Global Adjustment	SAC	More granularity (breakdown nuclear, gas generation, renewable, CDM), forecast for 1, 3 and 5 years
