Subject: Kitchener-Waterloo-Cambridge-Guelph Long-term Electricity Plan Posted

The Kitchener-Waterloo-Cambridge-Guelph (KWCG) Integrated Regional Resource Plan (IRRP), which considers the long-term electricity demand growth and supply conditions over the next 20 years, is now [online](#) along with a [response](#) to the feedback received.

The IRRP identifies electricity needs specifically related to capacity, restoration and end-of-life of some transmission infrastructure in the region. Medium-term needs are expected to be most effectively addressed by low-cost technical transmission solutions and long-term needs present an opportunity to explore alternative solutions, which was a strong theme heard through the engagement initiative. Overall, the report concludes that the electricity infrastructure is in a strong position to meet and support future long-term growth in the KWCG region.

For background about the study scope, engagement and details about the KWCG electricity planning region, visit the [engagement webpage](#) and download the full IRRP [report](#).

The IESO appreciates the participation and input received throughout the engagement initiative and looks forward to continuing discussions through the Southwest Regional Electricity Network. Register to join on [IESO Connects](#). As a reminder, to stay informed about future regional planning activities in your region please [subscribe](#) to receive the IESO's weekly Bulletin or for information specifically related to electricity planning activities.

Please contact engagement@ieso.ca if you would like to discuss the KWCG IRRP or if you have any questions.
