

Engagement Plan

Adjustments to Intertie Flow Limits

Introduction

System conditions in the Northwest region of Ontario have impacted the export capability from this region. In August 2021, the IESO began to apply adjustments to interchange scheduling limits on the Manitoba and Minnesota interfaces to reflect reduced Ontario export capability. The IESO is proposing to add clarifying language to the market rules specifying when internal transmission constraints will be considered by the IESO in setting intertie flow limits.

Stakeholders and Communities

The IESO encourages all interested parties to participate in this engagement and provide feedback.

Engagement Objectives

The objective of this engagement is to seek feedback from market participants on the proposed market rule amendment language in advance of the review by the Technical Panel.

Approach

The implementation of this engagement plan will be in accordance with the IESO's engagement principles. This is a public engagement process. All materials related to this initiative will be posted on the dedicated IESO engagement webpage. In addition, any information and feedback supplied by interested parties will become part of the public domain. Information and feedback that is marked

confidential will be treated accordingly by the IESO. The IESO will consider all relevant input and illustrate how feedback was considered in the development of the final outcomes

Proposed Engagement Schedule

Stakeholders are welcome to register for a webinar scheduled on November 22 to learn more about this engagement initiative.
