Subject: Update on October 27 Congestion Management Settlement Credit Recovery for Dispatchable Loads Webinar

Good morning,

During the October 27 Congestion Management Settlement Credit (CMSC) Recovery for Dispatchable Loads engagement webinar, the IESO received a question from a stakeholder to which the IESO committed to providing a response after discussing internally. That stakeholder question and the IESO's response is below.

***Stakeholder Question:** In the rare case that SEAL conditions could arise during abnormal conditions on the grid and subject the DL to negative CMSC, would this proposed rule provide a mechanism for the DL to eliminate/reduce this exposure?*

***IESO Response:** All CMSC amounts, positive and negative, during SEAL conditions may be considered under the IESO process described in Chapter 9, Section 3.5.6E. As well, market participants may inform the IESO if inappropriate CMSC amounts have been invoiced and the notice of disagreement process was not applicable by emailing customer.relations@ieso.ca.*

Following the October 27 webinar, the IESO did not receive any stakeholder feedback by the November 17 feedback deadline. At the November 10 Technical Panel (TP) meeting, the IESO presented the proposal as an education item to TP members. The IESO intends to present the proposed market rule amendment to the Technical Panel seeking a vote to post the amendment for broader stakeholder comment at the January 2021 TP meeting. Another update will be provided to stakeholders on this engagement based on the outcome of that vote.

If you have any questions regarding this engagement, please email engagement@ieso.ca.
