Subject: Update: Day-Ahead Market Initializing Conditions for Non-Quick Start Resources

This email is being sent as an FYI to all registered participants of the Public Information Session on the DAM Initializing Conditions for NQS Resources held in March.

As outlined in the Bulletin last week, updates to Market Manual 4.2 – Operation of the Day-Ahead Market [will be published](#) on **June 16**. These updates are related to revisions to the Day-Ahead Market initialization logic assumptions, to better reflect resource status and availability. This update was recently discussed during a [Public Information Session](#) and processed through the IESO's Change Management process via Baseline 55.1.

The first trade date for which these changes will be reflected in the Day-Ahead Market is **June 18**.

Please let us know if you have any questions.

Kind Regards,
IESO Engagement
