

Feedback Form

Enabling Resources – October 19, 2023

Feedback Provided by:

Name: Heather Sears

Title: VP, Market Services

Organization: Workbench Energy

Email: [REDACTED]

Date: October 19, 2023

Following the October 19, 2023 webinar on Enabling Resources, the IESO is seeking feedback from participants on considerations for IESO as it establishes timelines for both the implementation of foundational and enhanced models. IESO will work to consider feedback and incorporate comments as appropriate and post responses on the engagement webpage.

The referenced presentation can be found under the October 19, 2023 entry on the [Enabling Resources webpage](#).

Please provide feedback by November 9, 2023 to engagement@ieso.ca. Please use subject: *Feedback: Enabling Resources*. To promote transparency, this feedback, if provided in an AODA-compliant format (e.g. using this form) will be posted on the [Enabling Resources webpage](#) unless otherwise requested by the sender.

Thank you for your time.

Implementation Timelines

Topic	Feedback
<p>Given the updates the IESO presented in the meeting, what would you like the IESO to consider as it establishes timelines for both the implementation of foundational and enhanced models?</p>	<p>We appreciate the IESO moving forward with the enhanced models for resource participation for each of energy storage, hybrid, and DER resource types.</p> <p>The expansion of grid-connected electricity storage under the E-LT1 and LT1 procurements creates a significant increase in the number of resources and megawatts that will be operating under the limitations of the interim storage design. Any movement forward in the timeline to better align with MRP in-service would be helpful to ratepayers, reliability, and operability of the new systems and the grid.</p> <p>Given the expanding impact of storage as a grid resource, we encourage the IESO to engage with storage developers, owners, and operators to ensure that the implementation of the enduring storage model into the post-MRP market environment will align with the characteristics of the technology, and with the obligations that those resources hold.</p>
