Subject: Gas Phaseout assessment

This is regarding the IESO Gas Phase-out Impact assessment. It is necessary that the study undertaken has a goal of reducing green house gas emissions to the 2017 level forthwith with the phase completed by 2030 to meet our targets. This assessment should be fact based, comprehensive, unbiased and consider all options. It is expected this assessment will provide a sound technical basis for subsequent policy decisions.

We look forward to the assessment report.

Regards,
Faye and Cameron McFarlane
