Subject: Feedback - Gas Phase-Out Impact Assessment

To Independent Electricity Systems Operator,

We've got enough hot air around without creating pollution by burning dirty methane to generate electrical energy. The way forward is clear and so is the air when we use wind and solar energy to produce our electricity. We can go 5 miles out in Lake Ontario and have huge potential for wind power, and we can build solar over top of roadways and in hydro corridors. Every home in the province can easily produce 25% of its hydro with a small array and battery . Electric vehicles plugged in at night will help balance our surplus juice from uncontrollable aging nuclear reactors and can feed the grid in emergency situations or just to help meet peaks. Let's keep gas in the ground where it belongs.

Yours truly,

Ian MacIntosh
