Subject: Public Engagrment Process

Hi there,

I am writing because I'm terrified of the idea of planning on gas-fired electricity in our future.

We are in a climate emergency and need to be taking every step we can to move away from using fossil fuels. I expect to see serious and sound consideration of the alternatives to gas-fired electricity. We have great alternatives like hydro from Quebec and should plan on more wind and solar expansions. We should also be putting more effort and attention into conservation.

We need to phase out gas by 2030 to help our climate and clean our air. I ask that you please make this a priority.

Thank you,
Nathan Savelli
