Subject: Feedback Gas Phase-Out Impact Assessment

Dear IESO,

Thank you for the chance to provide input in the IESO's assessment of the implications of phasing out gas-powered electricity in Ontario.

I am a regular person, a rate payer, parent and voter. My first priority is to do everything that I can to increase the likelihood of my children inheriting a livable planet. I want to see Ontario reduce our carbon emissions, to that end.

Personally, I would prefer to see renewable energy in Ontario, but I don't have issues with nuclear energy. I live near the Pickering Power Plant.

It is important that we make the right choices for the future. We can't meet our carbon emission goals while investing in new carbon emitting infrastructure.

I don't believe that clean technology is too expensive. Failure to act will be more expensive for future generations. The cost of renewable energy keeps falling.

Please invest in clean energy, rather than increasing our carbon emissions. I also understand that it is possible to accept clean energy from Quebec.

Regards,

Penny McDougall-Di Giovanni
