Subject: ERP Foundational Hybrid Facility design document posted

June 27, 2022

As part of the Enabling Resource Program (ERP), the IESO has [published](#) the draft design document “Enabling Foundational Hybrid Facility Models” for stakeholder review.

The design document captures the key concepts and decisions that will enable hybrid facilities to participate in the IESO-administered markets (IAMs) to support Ontario’s future system needs. To learn more, visit the [Hybrid Integration Project webpage](#).

Stakeholders may provide feedback to help the IESO ensure the design document reflects the decisions that were identified during stakeholder engagement. The [feedback form](#) is available for stakeholders to download and submit to engagement@ieso.ca by July 22, 2022.

Responses to stakeholder feedback regarding the foundational models received following the April 22 stakeholder engagement meeting have also been [published](#).

Implementation Update: The IESO is currently identifying the requirements for implementation of the foundational hybrid facility models in the IAMs, including potential changes to market rules, market manuals, procedures, business processes and systems. Both foundational models are planned to be implemented to facilitate procurement timelines, and the IESO expects that the co-located model can be implemented sooner due to limited impacts. In addition, the IESO is identifying the requirements for implementation of changes to uplift allocation for storage facilities. Once requirements are confirmed, the IESO will provide an update on timelines for changes to governing documents.

Regards,
IESO Engagement
