**Subject:** ERP Foundational Hybrid Facility design document finalized

As part of the Enabling Resource Program (ERP), the IESO has published the final design document “Enabling Foundational Hybrid Facility Models” to the [Hybrid Integration Project engagement page](#).

Responses to stakeholder feedback received following the publishing of the draft design document on June 27 have also been posted to the [Hybrid Integration Project engagement page](#). There are no changes to the design document as a result of stakeholder feedback.

The design document captures the key concepts and decisions that clarify how hybrid facilities will participate in the IESO-administered markets (IAMS) to support Ontario’s future system needs. To learn more, visit the [Hybrid Integration Project engagement page](#).

Next Steps: The IESO is planning to meet with stakeholders during the stakeholder engagement days in late October to discuss implementation of the co-located hybrid model, including the timing for proposed changes to market rules and market manuals.

Regards,  
IESO Engagement
