**To:** Long Term RFP; IESO Engagement  
**Subject:** LT1 RFP - Questions

Dear IESO Team:

Regarding the LT1 RFP, we still have the following questions:

- Can new corporation that includes the qualified applicant and the project host be created after deliverability test results are provided?
- Will the 10 proposal limit also apply to LT1 RFP?
  - We already have interest from many more than 10 sites interested in working with us on a bid submission and strongly recommend for the LT1 RFP to either remove the proposal limit or significantly increase it.
  - Projects typically will be between 5-20 MW and total combined capacity (subject to grid availability) could approach 400 MW
- Even-though there may be a 10 proposal limit, can a qualified applicant submit more than 10 projects for deliverability tests?
- Can a Qualified Applicant form multiple "unique project entities" for multiple project submissions?
- And can these "unique project entities" submit different prices to reflect location specific requirements/costs?
- If a proponents submits a bid in response to the E-LT1 RFP, and is interested in submitting the same project in response to the LT1 RFP in the event proponent is not successful under the E-LT1 RFP, does the proponent have to submit the deliverability test on January 4, even though it will not be known until February 28 if the E-LT1 bid was successful? Or can a bid that was not successful under E-LT1 RFP, be resubmitted under LT1 RFP without the January 4 deliverability test?
- Can power be used for self generation (behind the meter) if the bid in the DAM is not accepted?
- Biogas and biomass fuelled generators have been confirmed to qualify as non-emitting resources. Is our understanding correct that therefore an RNG fuelled generator will be qualified as a non emitting resource?

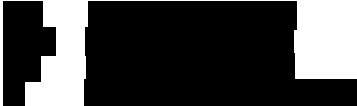

Could you also advise if/when/where answers to questions will be posted on line?

Yours Truly,

Jan Buijk
