Subject: Deliverability

Hi LRP1 Team;

Just listening to the webinar from last week . . . was on holidays so missed it.

Couple of questions:

1. Would it not be a good idea to have circuits that are available for generation, but not storage? I think some projects were a bit surprised that they got rejected due to charging reasons not generation reasons. It would be good to get that next level of detail. Is that possible?
2. Also will the new Chatham transmission line be deemed as usable for the LT1? Seems like timing might be tight.

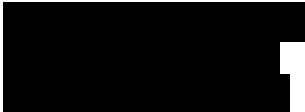

Please advise.

Thanks,

Jim
