Pathways to Decarbonization – February 24, 2022

Feedback Provided by:

Name: Dr Gary Bota

Title: MD

Organization: self

Email: [REDACTED]

Date: March 15, 2022

Following the February 24 engagement webinar, the Independent Electricity System Operator (IESO) is seeking feedback from stakeholders on the items discussed during the webinar. The webinar presentation and recording can be accessed from the [engagement web page](#).

Please submit feedback to engagement@ieso.ca by March 16. Please attach research studies or other materials for consideration by the IESO to support your submission.

If you wish to provide confidential feedback, please submit as a separate document, marked "Confidential". Otherwise, to promote transparency, feedback that is not marked "Confidential" will be posted on the engagement webpage.

Policy

| Topic | Feedback |

| Are the assumptions indicated reasonable and comprehensive in terms of scale and timing? | No. Why value conservation at a lower price than nuclear. Why limit import of Quebec power to such a low level. Why not move more quickly to heat pumps and thermal storage – we have both in our home x 10 years and they work great. |

| Topic | Feedback |
|--|--|
| Are there other considerations for the IESO? | I don't see any consideration of health care costs of burning additional gas in Ontario. |

General Comments/Feedback

This seems like an old way of doing things. Solar, wind, storage getting much cheaper each year. Your missing the whole problem of health care issues and costs associated with burning gas – I suspect health care costs outweigh any possible benefit to your plan.
