Subject: RE: November 26 Webinar Presentation Posted - Electricity Planning in Southwest Ontario

Thanks for the information webinar on Nov. 26th. My quick comment was in relation to some of the participants asking for seasonal and hourly load data. As you may be aware there have been significant concerns with light pollution in Leamington and Kingsville. You might see the projected greenhouse lighting load daily data vary over the next year or so as growers adapt to the requirements for light abatement. Some might find it too hard to abate at night and switch to lighting more in the day time. In the short term.

Just a thought that jumped to mind.

Take care
