<p>What information should be considered in finalizing the recommendations?</p>	<p>We continue to have the opinion that the 230kV lines that form the Gatineau transmission corridor represent a major intrusion into the pristine wilderness that is Algonquin Park. Rather than perpetuating this intrusion for yet another 100 years, the IESO should concentrate their efforts on developing options that would allow for the removal of these lines from within the Park.</p> <p>However, with that being said and the IESO moving forward with refurbishment, we now focus on comments on additional generation capabilities on our traditional lands. It appears that the IESO is not focused on providing a transmission system that provides the capabilities for increased generation in Eastern Ontario. Just refurbishment will not increase the transfer capability for the Corridor and thus limits our ability to expand our generation capabilities. A new transmission line into the Ottawa area from the north would accommodate our desires. In addition, a new line between St Lawrence and Merivale would further support our vision and desires.</p>

<p>How can the IESO continue to engage with the community as these recommendations are implemented, or to help prepare for future bulk and regional planning work?</p>	<p>Continue to meet with our communities and build a transmission system that supports our goals, needs, and investments. Rebuilding the Corridor accomplishes none of these.</p>
