Hi

I'm a member of a community association and I tuned into this webinar. It has all been way too high level for me . we have finally got into the info that transformer X might need to be replaced etc. That is interesting but I have no idea what you want from me. What possible feedback could I give you? What are the options? If you want info from ordinary citizens, you need to ask specific questions. I havent seen any yet. There are some general statements about different approaches, wire vs non wire approaches, but there is not nearly enough detail for me to formulate any kind of opinion.  
now we are talking about decarbonization...sounds like something we should do so my feedback would be to follow that up but again no details, no specific questions etc.

Hope you get something useful from others.

Sincerely

Gillian Cooper
