Topic	Feedback
What other local reliability concerns or growth scenarios in addition to those presented today should be further investigated?	Would be nice to analyze the impacts of large scale energy storage (ie. Steep Rock) on the system. In addition to reliability, how could it facilitate increased exports to both the MISO and Western Canada? Would be a great economic development opportunity for local generators as well as transmission companies.

Topic	Feedback
<p>What are some options or local opportunities that should be considered as we begin options analysis?</p>	<p>Same comment as above.</p>

## Ongoing Engagement

Topic	Feedback
<p>Is the data provided sufficient to enable your participation? What other data or information would you like to see further discussed or shared publically?</p>	<p>Excellent presentation by Max! Would also be nice to get a high level overview of where the electrons come from, and how they move around in the region.</p>

## General Comments/Feedback

Format is great and the sessions are very well moderated. Keep up the good work!
