

JUNE 29, 2021

Market Renewal Program

**Prepared for Technical Panel
Market Rule Amendment Review Process – Parking Lot**

Purpose

- At the last Technical Panel meeting, we presented a draft Market Renewal Program schedule. At that time we indicated we would have an open discussion at the June Technical Panel meeting to address concerns and challenges with the proposal.
- In addition, at the April meeting, the concept of a parking lot list was raised and supported as a way to track issues raised by Technical Panel members that are to be addressed during future batches of draft rules.

The IESO committed to the Technical Panel that we would report back at the June meeting on how we would implement a Parking Lot list.

Parking Lot

Criteria:

Questions with respect to specific terms or provisions that arise in the context of the panels review of the current batch that can only be addressed or fully assessed in light of specific information that the IESO knows will be provided as part of a future batch.

Parking Lot

Included to Date:

1. Definition of *resource*, as it will relate to energy storage
 - The definition will be revisited following the introduction of specific defined terms and provisions related to energy storage, currently under development for a future batch.
2. Definition of *shared daily energy limit*
 - To be further assessed in light of its application in Batch 3 (OBDI/GMOI)
